

Export documentation set

SYNTHETIC DOCUMENT - fictional data generated for the OpsPilot prototype. Not a real specification.

Every export shipment needs four documents: commercial invoice, packing list, certificate of origin and shipping instruction.

Product, net quantity, consignee, HS code, origin and destination port must be identical across all four documents.

Invoice total value must equal net quantity multiplied by unit price.

Packing list: number of packages multiplied by net weight per package must equal the net quantity.

Documents with any mismatch must not be released until corrected and re-validated.
